## Source links (Learn more)

1. We provide source links under Learn more for each entry. We also provide links inside information boxes.
2. We select sources based on perceived relevancy. We usually link to official government web pages relevant to the entry.

## Removed pages

Web pages can sometimes be removed, in which case the source link under Learn more is broken.

## Redirected pages

Web pages can sometimes be redirected, in which case the source link under Learn more is functional, but redirects to another URL. In some cases, the content is still the same or similar. However, in some cases, the URL is redirected to a page that is not relevant to the entry.

## Source link monitoring

1. All source links that can be found inside compliance requirements list entries and templates are listed in a spreadsheet.
2. A copy of the spreadsheet is uploaded on a separate mirror website.
3. The links are scanned by a plugin titled "Broken Link Checker". This plugin provides a list of:
  - 404: Broken URLs (page removed)
  - 301/302: Redirected URLs
4. We take the following action in case any of the above is detected:
  - 404: We replace the source link
  - 301/302: We assess if the new page is relevant\*

\*If yes, then we update to the current (redirected) source link. If not, then we replace the source link.

5. There are some scenarios in which a missing, incorrect, or irrelevant source link could be present in the compliance requirements list entries or templates:

- Plugin fails to detect 404/301/302
- Content changed on page (but no 404/301/302)

There is also a risk of human error, resulting in missing, incorrect, or irrelevant source links not being replaced.
